Antigravity report design and wording spec (HTML + PDF)

By Frank, for Tshedi. Brick C hand-off (checklist item C7, due Day 1 21:30). Based on manual §0.8, §0.9, §4.3, §4.9.3, §4.10 and §4.11.

1. How to use this spec

Frank owns the design and the wording. Tshedi implements both renderers in the engine: `report.html.j2` (§4.10) and `render/pdf.py` (§4.11). Everything below is meant to be built exactly as written. Where something is a choice I made rather than the manual's rule, it is marked **(my call)**. Open questions are collected in section 8.

The rules that apply to every output (app, HTML, PDF):

- **One source of truth.** Render only from `report.json`. Never compute a status, never re-rank, never sort. Categories stay in the order they arrive (backup, patch, software, protection, recovery) and fixes stay in `top_fixes` order.
- **Status is always icon + word + colour.** Never colour alone, so it survives colour blindness and greyscale printing.
- **Same hex values everywhere** (§4.3 tokens, section 2).
- **Plain English.** Grade 8 reading level, no jargon without a short gloss, no fear language.
- **Dates** read like "13 Nov 2026", in the PC's local date. Spelling is South African English ("licence", "colour").
- **Every fix looks the same on all three surfaces:** rank, title, why, steps, then "~5 min" and "Needs admin" if `needs_admin` is true.

2. Status vocabulary (single table)

These match the app's `StatusBadge` (§4.9.3). Do not invent other words.

Status	Word	HTML symbol	Text colour	Fill colour
`red`	Act now	●	`#b42318`	`#fef3f2`
`amber`	Improve	▲	`#b54708`	`#fffaeb`
`green`	Good	✓	`#067647`	`#ecfdf3`
`unavailable`	Not checked	⊘	`#475467`	`#f2f4f7`

Status	Word	HTML symbol	Text colour	Fill colour
`failed`	Check failed	×	`#475467`	`#f2f4f7`, dashed border

The overall badge uses the same table, driven by `overall` (only red, amber or green).

CSS variables for the HTML template, paste as is:

```
:root {
  --red: #b42318;   --red-bg: #fef3f2;
  --amber: #b54708; --amber-bg: #fffaeb;
  --green: #067647; --green-bg: #ecfdf3;
  --grey: #475467;  --grey-bg: #f2f4f7;
  --ink: #1a1a1a;   --muted: #667085; --line: #e4e7ec;
}
```

3. HTML report

3.1 Technical rules (from §4.10)

- One file. Inline `<style>`, no `<script>`, no external fonts, images, CDN or links.
- Jinja `autoescape=True`. A `<script>` in a software name must show as plain text.
- `<html lang="en">`, a real `<title>` ("Antigravity - Cyber Health Check - 14 Nov 2026"), one `<h1>`, then `<h2>` per section.
- Font stack: `"Segoe UI", system-ui, Arial, sans-serif`. Body 16 px, line height 1.5.
- Max width 860 px, centred, 24 px side padding. Must read well at 100% zoom on a 1366 × 768 laptop.
- Print: `@media print` sets A4, 15 mm margins, no background colours required, `page-break-inside: avoid` on every category section and every fix. Status still reads without colour because of the symbol and word.

3.2 Page structure and exact wording

Header

- Line 1: "Antigravity" (bold) and "Cyber Health Check".
- Overall badge (large): symbol + word from the table above.
- `summary` as a 20 px sentence under the badge.
- Small grey line: "Checked on {date}" and, if the licence org is available (see section 8), "Licensed to {org}".

- If `scan.is_admin` is false, a grey note: "Scanned without admin rights, so some checks were skipped."

Section: Your top fixes (`id="actions"`)

- Heading: "Your top 3 fixes". If fewer than 3: "Your top 2 fixes" or "Your top fix".
- If `top_fixes` is empty: "Nothing urgent. Re-check monthly."
- Each fix is a numbered block: rank number, title (bold), why, "Steps" as an ordered list, then the meta line "~5 min" plus "Needs admin" when true.

Section: Overview (`id="overview"`)

- Heading: "The 5 checks at a glance".
- Five equal tiles in a row (wrap to 2 or 3 per row on narrow screens). Each tile is a link to that category's anchor and shows the title, then symbol and word.

Five category sections (`id` is the category id, fixed order)

- `<h2>` title with the badge beside it.
- `explanation` paragraph.
- Evidence table with column headers "What we looked at", "What we found", "Status" (use `<th scope="col">`). Third column is the symbol only, with the word as hidden text for screen readers.
- Fix blocks for every id in `fix_ids` , same layout as the top fixes. If that fix is also in `top_fixes` , add a small tag "Top fix 2" **(my call)**. If `fix_ids` is empty, show "Nothing to fix here."
- For `unavailable` categories, add the line "Run Antigravity as administrator for a full check." only when `scan.is_admin` is false **(my call, because some unavailable checks, like BitLocker on Windows Home, cannot be fixed by running as admin)**.

Footer

- "Generated locally on this PC. Nothing was uploaded."
- "This is a guidance check, not a full security audit."
- "Engine {engine_version} · Baseline {baseline_version} · {os_caption}" in small grey text.

3.3 Evidence rows

Row `status`	How it looks
red, amber, green	Normal text, coloured symbol in the third column

Row `status`	How it looks
`unavailable`	Grey italic value (for example "Not checked - needs admin"), grey ⊘
`failed`	Grey italic value starting "Couldn't read:", grey ✕. Do not add the prefix twice if the value already starts with it
missing	Neutral, no symbol

4. PDF one-pager

A4 portrait, 210 × 297 mm, 15 mm margins (content width 180 mm). ReportLab canvas, built-in Helvetica only. Exactly one page: one `showPage()` call and nothing that can flow onto page 2.

4.1 Two glyph problems you will hit

Helvetica in ReportLab only covers Windows Latin-1 (cp1252) characters. That has two consequences:

1. **The status symbols ● ▲ ✓ ⊘ ✕ cannot be printed as text.** Draw them as small vector shapes with the canvas instead: filled circle (red), triangle (amber), tick path (green), circle with a slash (unavailable), cross (failed). Always draw the word next to the shape.
2. **The arrow "→" in fix steps (for example "Open Start → Windows Security") is not in cp1252** and will render as a box. In the PDF, replace "→" with ">" before drawing. The em dash and the ellipsis are fine.

Add a guard in `pdf.py`: encode every string with `cp1252` after the replacement, and fail the test if anything cannot be encoded.

4.2 Layout (distances from the top of the page)

Block	Position	Content and type
Header	15–40 mm	Left: "Antigravity" 20 pt bold, "Cyber Health Action Plan" 12 pt beneath. Under that, 9 pt grey: org (truncate to 40 characters with "…") and the date. Right: overall badge, 45 × 14 mm box with the token fill, a 1 pt border in the token colour, the drawn symbol and the word in 12 pt bold
Summary	42–55 mm	`summary`, 11 pt, maximum 2 lines

Block	Position	Content and type
Category strip	58–75 mm	Five boxes, each 33.6 mm wide with 3 mm gaps. Title in 8 pt bold (wrap to 2 lines), status symbol and word in 9 pt bold on the last line. Fill and border from the status tokens
Fix 1 to 3	80–255 mm	Three boxes, each 55 mm tall with 5 mm gaps (80–135, 140–195, 200–255)
No fixes	same area	Centred "Nothing urgent. Re-check monthly." in 13 pt with a drawn green tick
Footer	265–282 mm	8 pt grey: "Generated locally - nothing was uploaded. Guidance only, not a full audit." Second line 7.5 pt: engine, baseline and OS versions

If there are fewer than 3 fixes, keep the same box positions from the top and leave the rest empty. No placeholder boxes.

4.3 Inside one fix box

- A 2 mm vertical stripe on the left in the fix's severity colour, plus the word "Act now" (red) or "Improve" (amber) in 9 pt bold at the top right, so severity is not colour alone.
- Rank number in a filled circle, 8 mm across, at the top left.
- Title: 13 pt bold, one line, truncate with "…".
- Why: 10 pt, at most 2 lines, 12 pt leading.
- Steps: 10 pt, 12 pt leading, numbered "1.", "2.", one line each, truncated with "…" at the box width. Show at most 4. If there are more, replace the fourth with "…see full report".
- Bottom line, 9 pt grey: "~5 min" and, if `needs_admin`, " · Needs admin".

These sizes fit with room to spare (about 41 mm of the 55 mm is used by the worst case).

5. Copy rules for the engine's text

The engine writes `explanation`, fix `title`, `why` and `steps` (§2). These limits keep the PDF from truncating and keep the tone consistent. Please make the fixture text follow them.

Field	Rule
`summary`	One sentence, at most 90 characters. Say how many urgent issues there are, and mention any "Not checked" or "Check failed" categories
`explanation`	One or two short sentences, at most 200 characters (the contract limit). Start with what was found, then why it matters
Fix `title`	A verb first: "Turn on…", "Update…", "Install…". At most 50 characters
Fix `why`	One sentence, at most 140 characters, about the risk in everyday words
Fix `steps`	1 to 5 steps, each at most 80 characters, starting with a verb. Write paths as "Open Start > Windows Security"

Gloss the first use of any technical term, in brackets: "BitLocker (disk encryption)", "Controlled Folder Access (stops unknown programs changing your files)", "restore point (a saved snapshot Windows can go back to)".

Avoid: "compromised", "hacked", "critical vulnerability", exclamation marks, and anything that sounds like a guarantee ("you are safe"). The tool gives guidance, not a verdict on the PC.

6. Fixed wording bank

Where	Exact text
Product line	Antigravity - Cyber Health Check
PDF title	Antigravity - Cyber Health Action Plan
Fix heading	Your top 3 fixes
No fixes	Nothing urgent. Re-check monthly.
Overview heading	The 5 checks at a glance
Non-admin note	Scanned without admin rights, so some checks were skipped.
Unavailable hint	Run Antigravity as administrator for a full check.

Where	Exact text
No fix needed	Nothing to fix here.
Footer 1	Generated locally on this PC. Nothing was uploaded.
Footer 2	This is a guidance check, not a full security audit.
Effort	~5 min
Admin flag	Needs admin

7. Acceptance checks for Tshedi

Run all of these against the all-states mock (§4.12) and every `shared/fixtures/report.*.json`.

HTML

- Exactly 5 category sections in the fixed order, and a 5-tile overview with working anchors.
- Every status word from section 2 appears at least once for the all-states mock, including "Not checked" and "Check failed".
- No `<script>` tag and no `http://` or `https://` anywhere in the file. A `<script>alert(1)</script>` software name appears as visible text.
- No more than 3 fixes in the "Your top fixes" section, in `top_fixes` order.
- Prints on A4 with no category split across pages. View once in greyscale and confirm every status is still readable.

PDF

- File starts with `%PDF` and the canvas reports exactly one `showPage()`.
- Every drawn string encodes as cp1252 after the arrow replacement.
- Steps beyond 4 show "…see full report". A 40+ character org name is truncated with "…".
- The no-fixes fixture shows "Nothing urgent. Re-check monthly."
- Frank and Tshedi look at the first render together and sign it off by Day 1 21:30.

8. Open decisions

1. **Licence org is not in `report.json`.** The manual's HTML header and PDF header both show it, but §2.3 says renderers use the report model only, and §0.8 has no org field. Options: (a) add an optional `licence_org` field through the §0.10 contract-change procedure (minor version bump), or (b) drop the org from the HTML and PDF headers. I recommend (a), since the app already shows it. Needs Tshedi and Schwan to agree.
2. **Evidence ID (AG-…)** appears in the app footer and the insurer export but is not in `report.json`, so this spec leaves it out of the HTML and PDF.
3. **Time zone.** `generated_at` is UTC. The spec shows the local date only, so the engine should convert before formatting.
4. **Fix text in fixtures** currently uses "→" in steps (per the §0.8 example). The PDF renderer handles it, so no change is needed unless you would rather use ">" everywhere.
